Description	Web	Android	iOS
-------------	-----	---------	-----

<p>1. Organization profile > Photos A new feature is to added i.e. Add album by clicking on which user can add all the posts in that organization.</p> <p>Organization profile > timeline User should be able to create new post in the organization. Organization posts will be the posts which are created by Org Admin or Org Owner going on the organization timeline</p> <p>Organization profile > about User should be able to edit details from here.</p>	Yes	Yes	Yes
<p>2. Organization > add organization</p> <p>If user creates the organization/ project on web and fills in details and if without saving gets clicks outside the popup then the popup goes away as well as the data is gone. Make this popup go away only when user either clicks save or user closes the popup by clicking on cross.</p> <p>In add organization popup, Register should be replaced by Create.</p>	Yes	No	No
<p>3. Add organization While adding new organization, make only following fields mandatory :</p> <ul style="list-style-type: none"> a. Organization Name b. Organization City, State and Country <p>Rest all fields should be optional.</p>	yes	yes	yes
<p>4. Project>Add project</p>	yes	yes	yes

While adding new project, project color should be white by default.			
5. Advertisements Following text will be shown in advertising space: To advertise with us on this space contact us at advertise@neeyam.com	yes	no	no
6. Login session Login Session to be increased to 24 hours so that the user is not logged out on web application.	yes	No	No
7. Documents > media folder In document section, every Project will have a media folder which will contain all the images and videos of the public posts on the project. User will not be able to add any image or video or file in this folder, it is for view only purpose. Document> add folder When we add a folder in an existing folder and when we delete existing folder then still it is showing there.	yes	yes	yes
8. Posting file: When user will post a file then user should be able to open file by clicking on it once. When user click on the file , a pop-up opens where there are two icons which are	yes	no	no

<p>confusing. Icon should be placed near the file name line as shown in below image:</p> 			
<div data-bbox="423 688 748 827" data-label="Text"> <p>This icon of the file type is confusing for the user and should be moved to file name line</p> </div> <p>9. Project –</p> <ul style="list-style-type: none"> ! User should be able to move projects in to archive folder. There should be an option 'Move to archive' in the project section. ! There will be a folder in the botton where all archived projects will be available . ! Also in archived folder, there will be a function to un-archieve the projects. ! It should be user dependent. Projects will move in the archived folder only for that perticular user, not for all. ! Archiving a project will move projects, float, documents, posts to archive. Posts of archived projects will not show on timeline of that user . ! There will be also a delete option for Archived projects in archived projects folder. 	yes	yes	yes

! Push notifications related to the project on which the user has archived the project will not be sent to app.			
10. Float – While creating float , user should be able to select all locations which will also imply changes in the float notification and float display of vendors. Also locations should be in alphabatical order with proper alignmnet.	yes	yes	yes
11. Bulk registration: Org Owner/ Admin will have a function on Web version only to add users in bulk: Step 1: Press “Add Bulk Member” add a function on the team members section of a particular project, enter their name, email address and phone number. Step 2: All the users will receive an email with a welcome email and registration details and links to download the app and link to the website. Password will be system generate. Step 3: Now whenever this(Added through bulk registration functionality) user login’s to the application for the first time will receive email and SMS for OTP registration which will then allow user to frist verify phone number and then will enter rest of the details. The profile section where user will be able to setup his/her profile details and will then login and contine using the app.	yes	No	No
